

# IoTComs

Connect Systems & Stakeholders

## What is IoTComs?

IoTComs is an contextual communication solution for companies to optimize their current business work flows within their IoT systems. The IoT economy has exploded throughout the past decade, yet companies continue to utilize inefficient and expensive legacy work flows. New definitions of corporate responsibility require smart solutions and IoTComs offers just that: seamless communication between enterprise IoT systems and the service providers, stakeholders, and the impacted user community.

## Trusted by:

*Optimize your current IoT systems to automate inefficient work flows.*

## IoTComs Features

Automated creation of tickets and alerts to service providers

SMS or push notifications to update service providers and stakeholders

Free, contextual voice calls from any smart device

# HOW Does IoTComs Work?

With **IoTComs** you can add automated ticketing and communication into your existing IoT systems. Service providers can keep stakeholders and the user community updated in real-time.

## How IoTComs Works

Create Device Communication Profile

Define Triggers for Communication

Communication to Defined Contacts

System or Contact Updates Ticket

## How You Benefit

### Improve Operational Efficiency

Remove the historic processes of ticket creation, services assignment, etc. By integrating IoTComs automated processes, there is no need for the step-by-step processes within your current business workflows.

### Contextual Communications

Ensure service providers and stakeholders are up to date with automated SMS, Calls, or Notifications that provide context to the situation.
